# 1 INTRODUCTION

---

The aim of this document is to provide an introduction to the MAFE datasets. Starting to use any new dataset is always challenging. This is especially true with complex biographical data, such as those of the MAFE life event history questionnaire. This document aims at giving basic information to help users understand the structure and content of the dataset.

More detailed information is available on the project website ([mafeproject.site.ined.fr/en/](http://mafeproject.site.ined.fr/en/)), especially:

- A series of **methodological notes** at:
- A list of publications and a collection of **working papers** offering an overview of analyses that can be carried out using the MAFE data at:
- The **survey questionnaires** in French, English, Spanish and Italian
- The interviewers' **handbooks**
- The **codebooks**.

The full documentation of the MAFE dataset is also available at :

<http://nesstar.ined.fr/webview/?v=2&study=http://nesstar.ined.fr/obj/fCatalog/Catalog17&language=en><sup>1</sup>

## 2 PRACTICALITIES

---

### 2.1 *How to access the MAFE data*

The MAFE datasets are made available to the international scientific community through the portal of the Réseau Quetelet (<http://www.reseau-quetelet.cnrs.fr>).

To directly order the MAFE datasets, go to:

<https://quetelet.casd.eu/en/utilisateur/connexion>

and create your user account (or log in if you already have one).

Once connected, click the tab "New request". You'll be asked to provide some information, such as the title and a description of your research project. Then click on "Select studies", where you can either find the MAFE datasets by clicking on INED's tab or by searching "MAFE" thanks to the filter tool. Don't forget to validate your request (at the bottom of the page).

When your request is complete, it will be checked within a few days (waiting time may vary) by someone at INED. If your order is approved, you will be requested to sign and send back a

---

<sup>1</sup> The right part of this web page is in French, but the details on MAFE (on the left) are in English.

printed obligations form. Once your form has been received at INED, you will be able to download the MAFE data online (through the Réseau Quetelet portal).

All files disseminated via the Réseau Quetelet are available free of charge for use in research. All commercial use is therefore prohibited.

If you wish to consult the content of all MAFE's datasets before ordering them, you can use INED's Nesstar webview tool at:

<http://nesstar.ined.fr/webview/?v=2&study=http://nesstar.ined.fr/obj/fCatalog/Catalog17&language=en><sup>1</sup>

## 2.2 Software

### 2.2.1. Stata

The MAFE datasets are made available in **STATA 13**. However, all files have been saved in a format that can be opened with previous versions of **STATA (10 to 12)**, using the `saveold` command.

**For v10-12 users:** The command `use13` allows you to load datasets created by Stata 13.

To install the command :

```
findit use13
```

or

```
ssc install use13
```

To open a file created with Stata 13, use the following command (giving the appropriate filename) :

```
use13 "sn_qb_activity.dta" [, clear]
```

### 2.2.2. SAS

A Stata data file can be read via the menu (**File -> Import Data -> Data...**) or via syntax with the `proc import` command:

```
proc import
datafile="D:\MAFE\SENEGAL\BIOGRAPHIC_DATA\sn_qb_association.dta"
out=mafe.association dbms = dta replace;
run;
proc contents data= mafe.association;
run;
```

Alphabetical list of variables and attributes						
N	Variable	Type	Length.	Format	Informat	Title
8	age_survey	Num.	8			Age at survey
16	flag_age	Num.	8	FLAG_AGA.		Less than 25 years and more than 75 years

Alphabetical list of variables and attributes						
N	Variable	Type	Length.	Format	Informat	Title
18	flag_arrival	Num.	8	FLAG_ARA.		First migration in Europe before 18
17	flag_visitor	Num.	8	FLAG_VIA.		Resident in Europe but surveyed in Africa
15	id_country	Texte	2	\$2.	\$2.	Country of the survey
1	ident	Texte	7	\$7.	\$7.	Biographic individual identifier
2	n_indiv	Num.	8			ID of the individual in the HH
3	n_menage	Num.	8			ID of the HH
4	num_coti	Num.	8			Contribution number
11	num_dr	Texte	2	\$2.	\$2.	Constructed ID of the PSU
7	q1	Num.	8	Q1A.		Sex
10	q18	Num.	8	Q18A.		Which is the last school year you attended
5	q1701d	Num.	8	Q1701DA.		Start year
6	q1701f	Num.	8	Q1701FA.		End year
9	q1a	Num.	8	Q1A_1A.		Year of birth
13	strata_area	Num.	8			Stratum of the CD defined by the population census
12	strata_hh	Num.	8	STRATA_A.		HH with migrants
14	strata_ind	Num.	8	STRATA1A.		Presence of migrant in the HH during the census
20	weight_all	Num.	8			Weighting normalized on the 4 countries
21	weight_etry	Num.	8			Weighting normalized by country
19	weight_eur	Num.	8			Weighting normalized on the 3 European countries

### 2.2.3. SPSS (version 15 or above)

A Stata data file can be read via menu (**File -> Open -> Data...** ) or via syntax with the **get stata file** command:

```
get stata
file=D:\MAFE\SENEGAL\BIOGRAPHIC_DATA\sn_qb_association.dta'
```

### 2.2.4. R

First install the **foreign** package from CRAN's mirror website

```
library(foreign)
mafe.association <-
read.dta( "D:\MAFE\SENEGAL\BIOGRAPHIC_DATA\sn_qb_association.dta", convert.factors = TRUE)
```

## 2.3 How to cite MAFE

Any user of the MAFE data should properly cite as follows:

**In English:** The MAFE project is coordinated by INED (C. Beauchemin) in partnership with the Université catholique de Louvain (B. Schoumaker), Maastricht University (V. Mazzucato), the Université Cheikh Anta Diop (P. Sakho), the Université de Kinshasa (J. Mangalu), the University of Ghana (P. Quartey), the Universitat Pompeu Fabra (P. Baizan), the Consejo Superior de Investigaciones Científicas (A. González-Ferrer), the Forum Internazionale ed Europeo di Ricerche sull'Immigrazione (E. Castagnone), and the University of Sussex (R. Black). The MAFE project has received funding from the European Community's Seventh Framework Programme under grant agreement 217206. The MAFE-Senegal survey was conducted with the financial support of INED, the Agence Nationale de la Recherche (France), the Région Ile de France and the FSP programme 'International Migrations, territorial reorganizations and development of the countries of the South'. For more details, see: <http://mafeproject.site.ined.fr/>

**In French:** Le projet MAFE est coordonné par l'INED (C. Beauchemin), en partenariat avec l'Université catholique de Louvain (B. Schoumaker), la Maastricht University (V. Mazzucato), l'Université Cheikh Anta Diop (P. Sakho), l'Université de Kinshasa (J. Mangalu), l'University of Ghana (P. Quartey), l'Universitat Pompeu Fabra (P. Baizan), le Consejo Superior de Investigaciones Científicas (A. González-Ferrer), le Forum Internazionale ed Europeo di Ricerche sull'Immigrazione (E. Castagnone), et l'University of Sussex (R. Black). Le projet MAFE a reçu un financement du Septième Programme-cadre de la Communauté européenne (subvention 217206). L'enquête MAFE-Sénégal a été réalisée grâce au soutien financier de l'INED, de l'Agence Nationale de la Recherche, de la région Ile de France, et du programme FSP 'Migrations internationales, recompositions territoriales et développement dans les pays du Sud'. Pour plus d'information, voir : <http://mafeproject.site.ined.fr/>

In addition, for survey design, users can refer to the following documents:

Beauchemin, C. (2012). Migrations between Africa and Europe: Rationale for a Survey Design. MAFE Methodological Note 5. Paris, Ined: 45.

Schoumaker, B., C. Mezger, N. Razafindratsima and A. Bringé (2013). Sampling and Computation Weights in the MAFE Surveys. MAFE Methodological Note 6: 73.

These MAFE methodological notes are available at:

[http://mafeproject.site.ined.fr/en/methodo/methodological\\_notes/](http://mafeproject.site.ined.fr/en/methodo/methodological_notes/)

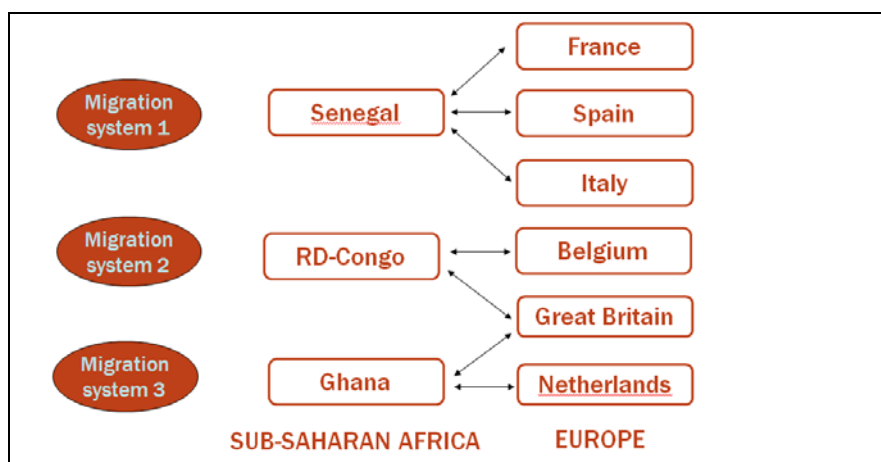

### 3 GENERAL DESIGN OF THE MAFE PROJECT

#### 3.1 General design

A full description of the survey design can be found in the above cited texts. The main features of the MAFE project data can be summarized as follows:

1. The MAFE data are **comparative** across 3 sub-Saharan migration systems (see Figure 1): migration from and to the Democratic Republic of Congo (Congo, in the rest of this document), from and to Senegal, and from and to Ghana, with a focus on immigration in Europe. Note that (almost) exactly the same questionnaires were used in all countries, whatever the country where the data was collected and whatever the migratory status of the respondents (current migrant, returnee, non-migrant). As a result, all datasets have exactly the same structure. The differences between MAFE-Congo, MAFE-Ghana and MAFE-Senegal are listed in Appendix 1.
2. The MAFE data are **transnational**, i.e. data were collected both in origin and destination countries, which means that data are available on migrants abroad at the time of the surveys, and also on returnees and non-migrants interviewed in origin countries. Note that data were collected only in the main cities of the origin countries. In Europe, samples included Congolese, Ghanaian and Senegalese migrants whatever their region of origin.
3. Two questionnaires were used: (1) a **household (HH) questionnaire** (only in origin countries), that includes information on the household members and also on (domestic and international) migrants living out of the household; and (2) a **life event history questionnaire**, comprising standardized life histories (in all countries, at origin and destination).

Figure 1. Countries involved in the MAFE Project

## 3.2 Points for special attention

Users of the MAFE data must be especially aware of some specific points to avoid making serious errors in their analyses.

**Household (HH) Data.** The term “household” refers to the fact that the data were collected among households in cities of origin countries. However, users must be aware that the data contain information not only on the household members but also on people who are living out of the household. Users must thus be careful in selecting the individuals on whom they want to produce results. More information is given in section 6.1.

**Biographic data.** The files containing the information collected through the life event history questionnaires are not ‘simple’ rectangular files with each observation (line) corresponding to an individual. All biographic files (except the “qb\_general” files) are period-persons datasets in which each observation corresponds to a spell (with a duration which may vary for each spell). For example, a person who lived in three different places will be represented by 3 observations/lines in the “housing” datafile, i.e. one observation per housing spell. In any case, simple cross-tabulations using the biographic files would not describe the population at the time of the survey, except if the analyses were strictly restricted to the last spell of each individual. This type of data organization, suited to life history analysis, requires that users prepare the data very carefully before analysis. More details on the biographic file structure is given in section 7.

FORTHCOMING: in the MAFE Methodological Notes series, tutorials explaining how to manage and assemble MAFE datasets [see: [http://mafeproject.site.ined.fr/en/methodological\\_notes/](http://mafeproject.site.ined.fr/en/methodological_notes/)]

## 3.3 Organization of datasets and datafiles

### 3.3.1. Structure of the datasets

There are 3 large datasets, each one corresponding to a flow under study in MAFE: DR-Congo, Ghana, Senegal. For a single flow, the data collected in various countries are merged together. For instance, the biographic datasets related to Senegal include the data collected in Senegal, France, Italy and Spain.

Each of the flow-specific datasets combines two sub-datasets: one is related to the household questionnaire (two files, described in section 6), the other to the life event history questionnaire (18 files described in section 7, each one corresponding roughly to a questionnaire module).

The files names are indicative of their content, and are structured as follows:

```
flow_questionnaire_topic_date.dta
```

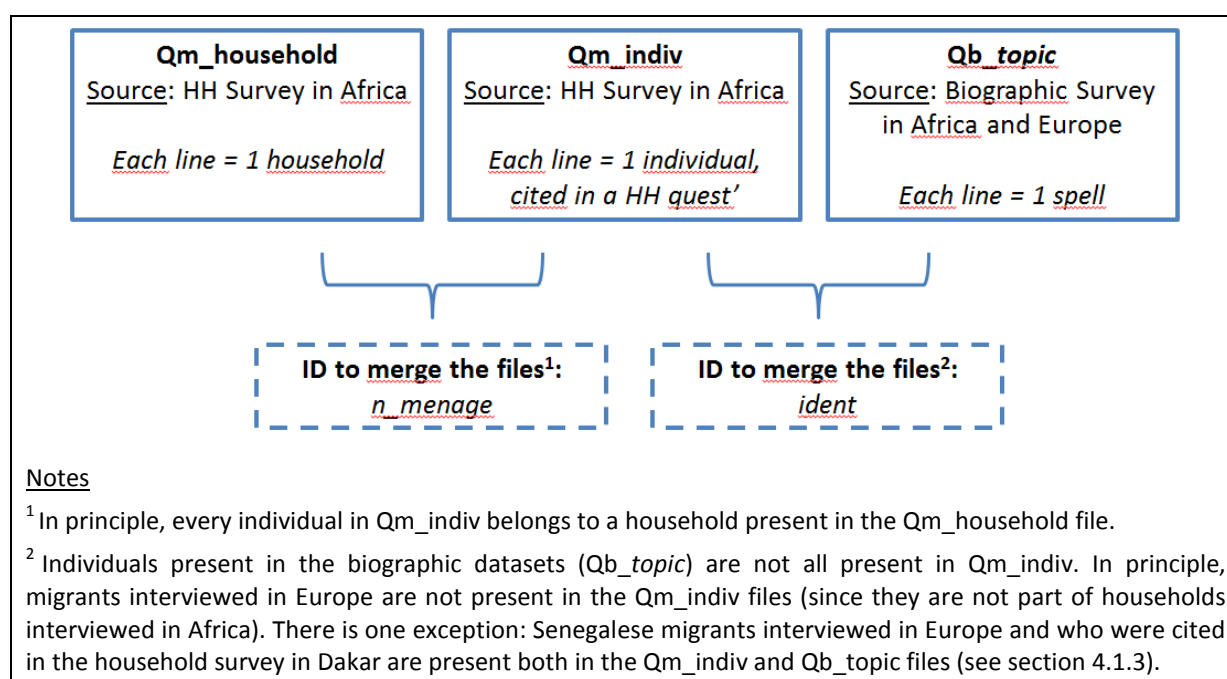

where :

- “flow” corresponds either to Congo (cg), Ghana (gh) or Senegal (sn),
- “questionnaire” corresponds to household (qm for “questionnaire ménage” in French) or life event history (qb for “questionnaire biographique” in French),
- “topic” corresponds to the topic of the file (see sections 6 and 7 for details),
- “date” indicates the version of the file (following this format:YYMMDD).

NB: The 3 MAFE datasets are almost identical. Differences are listed in Appendix 1.

### 3.3.2. Combining datasets - ID variables

The MAFE datasets contain a large number of files, some of which can be combined for analysis. The following figure shows how data collected at the household and individual levels can be merged.

The various files of the biographic datasets can also be combined. Special care is needed. See section 7 for more details and forthcoming tutorials on the MAFE website.

## 4 SAMPLING & WEIGHTING

This section summarizes the information given in: Schoumaker, B., C. Mezger, N. Razafindratsima and A. Bringé (2013). Sampling and Computation Weights in the MAFE Surveys. MAFE Methodological Note 6: 73.

### 4.1 MAFE Samples

MAFE combines random sampling of households and individuals in origin countries (main cities), with quota sampling among migrant populations in destination countries. Overall,

between early 2008 and early 2010 (Table 1), more than 4,000 household questionnaires and 4,000 individual life event histories were successfully completed in 3 African countries (Senegal, Ghana, DR Congo), and around more than 1,400 life event histories of African migrants were collected in six European countries (Belgium, France, Italy, The Netherlands, Spain, UK).

Weights are available to adjust the results for the sampling strategy and to correct for non-response. The weighting variables are presented in the following section.

**Table 1. Samples sizes and survey years by country**

	MAFE-Congo			MAFE-Ghana			MAFE-Senegal			
Country of survey	Congo	UK	Belg.	Ghana	UK	Neth.	Senegal	France	Italy	Spain*
Survey year	2009	2009	2009 2010	2009	2009	2009 2010	2008	2008	2008	2008
Households	1,576	-	-	1,246	-	-	1,141	-	-	-
Individuals	1,638	149	279	1,243	273	149	1,062	201	205	200
* About 400 life event history questionnaires were completed in a new survey round in 2010 (data not yet available).										

#### *4.1.1. Definition and Selection Criteria*

**Household Survey.** Households are defined as “a person or a group of related or unrelated persons, who live together in the same housing unit, and who share meals with each other”. They were randomly selected to be representative of the regions surveyed in Africa. Households reporting migrants abroad and/or return migrants were over-sampled. 3 strata were thus defined to this end:

- Households with returnees from abroad (whatever the country)
- Households with migrants abroad<sup>2</sup>
- Other non-migrant households

**Life event history survey.** The target population was defined using the same criteria in departure and destination countries in order to maximize the sample homogeneity:

- Respondents were aged 25-75 at the time of the survey;
- Respondents were born in one of the African country (DR Congo, Ghana, Senegal);
- Respondents have (or have had) the citizenship of the departure country (only applied in MAFE-Senegal);
- In Europe especially, migrants were included only if they had emigrated out of Africa at age 18 or later, for a stay of at least one year.

---

<sup>2</sup> In Senegal, households with returnees and with migrants abroad were merged into a single stratum.

NB : During the field work, some individuals who did not strictly comply with the full set of criteria were nevertheless surveyed. They were kept in the datasets and marked with flag\_variables (see 2.4.1).

Individuals were selected to fill 4 strata according to their migration status:

- Migrants at the time of the survey (surveyed in Europe only);
- Return migrants: those who have lived at least one year out of their origin country, whatever the country (surveyed in Africa only);
- Migrants' partners left behind at origin: individuals (often women) whose partners are currently living abroad (surveyed in Africa only);
- Other non-migrants (surveyed in Africa only).

#### 4.1.2. Sampling in Africa

In the three African countries, stratified random samples of households and individuals in the target areas were selected (see Table 2). The target areas were the city of Kinshasa in DR Congo, the city of Dakar in Senegal, and two cities (Accra and Kumasi) in Ghana. In each city, a sampling frame of primary sampling units was prepared, and primary sampling units randomly selected. A listing operation was carried out in each of the selected survey sites to prepare the sampling frame of households. The sampling frame at the second stage (households) was stratified, so that households with return migrants or migrants abroad could be oversampled. The number of households successfully interviewed was 1,141 in Senegal (2008), 1,246 in Ghana (2009) and 1,576 in DR Congo (2009).

In each selected household, one or several respondents were selected for the life event history survey. In Ghana and DR Congo, all returnees and partners of migrants living abroad were selected, and another (non-migrant) eligible member was randomly selected. In Senegal, up to two returnees and partners of migrants were randomly selected, and another individual was randomly selected. The number of life event histories successfully completed is close to the number of households (1,062 in Senegal, 1,243 in Ghana and 1,638 in DR Congo).

**Table 2. Sampling characteristics in African countries**

	Senegal	Ghana	Congo
<b>Target areas</b>	Dakar Region (26% of the population of the country)	Accra and Kumasi (12% of the population of the country)	Kinshasa (17% of the population of the country)
<b>Stratification</b>	First stage: 10 strata based on the proportion of international migrants.	First stage: two cities (Accra and Kumasi).	First stage : 3 strata based on prevalence of migration
	Second stage: 2 strata households with and without migrants	Second stage: 3 strata: households with migrants abroad, with return migrants, without migrants	Second stage: 3 strata: households with migrants abroad, with return migrants, without migrants
	Third stage: 3 strata: returnees, partners left behind and other non-migrants	Third stage: 3 strata: returnees, partners left behind and other non-migrants	Third stage: 3 strata: returnees, partners left behind and other non-migrants
<b>1<sup>st</sup> stage: selection of primary sampling units</b>	Selection of 60 census enumeration areas.	Selection of 60 census enumeration areas in Accra and 20 in Kumasi	Selection of 29 neighbourhoods and 3 streets per neighbourhood (87

	Senegal	Ghana	Congo
	Sampling frame: 2002 Population and Housing Census	Sampling frame: 2000 Population and Housing Census	sampling units) Sampling frame: Sampling frame of the 2007 DHS
<b>2<sup>nd</sup> stage: selection of households</b>	Random selection of 22 households per enumeration area. 11 households selected in each of the two strata. If fewer than 11 households available in one or several strata, the remaining households are selected in the other stratum.	Random selection of 24 households per enumeration area. 8 households selected in each of the 3 strata. If fewer than 8 households available in one or several strata, the remaining households are selected in the other stratum.	Random selection of 21 households per enumeration area. 7 households selected in each of the 3 strata. If fewer than 7 households available in one or several strata, the remaining households are selected in the other stratum. In a few streets, there were fewer than 21 households; all of them were selected.
<b>3<sup>rd</sup> stage: selection of individuals</b>	People aged 25-75, born in Senegal and who have/had Senegalese citizenship. Up to two return migrants and partners of migrants, and one randomly selected other eligible person.	People aged 25-75, born in Ghana. All the return migrants and partners of migrants, and one randomly selected other eligible person.	People aged 25-75, born in Congo. All the return migrants and partners of migrants, and one randomly selected other eligible person.
<b>Sample size (selected households)</b>	1,320 households	1,920 households (1,440 in Accra and 480 in Kumasi)	1,773 households
<b>Completed household questionnaires*</b>	1,141 households, including: Non-migrant HH: 458 HH with returnee(s): 205 HH with current migrant(s): 617	1,246 households, including: Non-migrant HH: 449 HH with returnee(s): 346 HH with current migrant(s): 675 Household with returnees and current migrants: 224.	1,576 households, including: Non-migrant HH: 470 HH with returnee(s): 351 HH with current migrant(s): 1,027 Household with returnees and current migrants: 272.
<b>Household response rate</b>	86.4 %	64.9	88.9 %
<b>Sample size (selected individuals)</b>	1,387	1,490	1,946
<b>Completed life event history questionnaires</b>	1,062 individuals, including: Returnees: 193 Partners left behind: 101 Other non-migrants: 768	1,243 individuals, including: Returnees: 319 Partners left behind: 84 Other non-migrants: 840	1,638 individuals, including: Returnees: 322 Partners left behind: 77 Other non-migrants: 1,239
<b>Individual response rate</b>	76.6 %	83.4 %	84.2 %
<b>Overall response rate</b>	66.1%	54.1 %	74.9 %
<p>Adapted from: Schoumaker, B. and A. Diagne (2010). "Migrations between Africa and Europe: Data Collection Report." MAFE Methodological Report(2): 26. <b>NB:</b> Numbers in this table are smaller than in the cited report because some individuals were dropped to comply more strictly with the selection criteria.</p> <p>* The sum of non-migrant households with the households comprising returnees and left behind partners may be higher than the total number of surveyed households because one household may include both returnees and left behind partners.</p>			

#### 4.1.3. Sampling in Europe

In five of the six European countries, no suitable sampling frame was available to select randomly individual respondents (i.e. regular and irregular migrants). As a result, quota sampling was used. In all countries, the quotas were set by age and gender at least (see Table 3). In France, the socio-occupational category was also included as a quota criterion,

while in Belgium and the UK, the place of residence was used to set the quotas. In most countries, sub-regions with the largest numbers of migrants were selected.

Randomness was included in the samples in different ways. For instance, in Belgium, a random sample of places was selected according to the number of people of Congolese origin living in there. The combination of different recruitment methods also ensured that different types of persons had a probability of being included in the sample. For instance, some respondents were recruited in public spaces (street, metro station, hairdresser...), others were randomly selected from list of volunteers identified in churches, etc. In France, Italy and Spain, some of the respondents were also selected using the contacts obtained in the household survey in Senegal<sup>3</sup>.

Overall, around 200 migrants were interviewed in each destination country (Table 3). The number was slightly lower in the UK (around 150 per origin country) and higher in the Netherlands and Belgium (around 280). About 1,450 African migrants have been interviewed in Europe. A further survey round was carried out in Spain, where 400 additional migrants were surveyed in 2010. The data from this latest survey are not yet available.

**Table 3. Sampling characteristics in European countries**

Country	Target areas	Sample size	Quotas	Recruitment methods
<b>MAFE-Senegal</b>				
France	3 selected regions: Ile de France, around Paris; Rhône-Alpes, around Lyon; Provence-Alpes-Côte d'Azur, around Marseille.	201 (46% females), including undocumented migrants - at the time of the survey: 12% <sup>(1)</sup> - in the past <sup>(2)</sup> : 29% 80 % have lived at least one year in the region of Dakar	By age, gender and socio-economic status	Selection from contacts obtained in Senegal, Public spaces, migrant associations, snowballing, interviewers' contacts
Italy	4 selected regions: Lombardia, Emilia Romagna, Toscana, Campania.	205 (39% females), including undocumented migrants - at the time of the survey: 17% - in the past: 46% 54% have lived at least one year in the region of Dakar	By age and gender	Selection from contacts obtained in Senegal, Public spaces, migrant associations, snowballing, interviewers' contacts
Spain	12 provinces: Almería (Andalucía); Alicante & Valencia (Comunidad Valenciana); Barcelona, Lérida, Tarragona & Gerona (Cataluña); Madrid (Comunidad de Madrid); Zaragoza (Aragón); Las Palmas (Islas Canarias); Murcia (Comunidad Autónoma de Murcia); Baleares (Islas Baleares)	200 (51% females), including undocumented migrants - at the time of the survey: 18% - in the past: 57% 61 % have lived at least one year in the region of Dakar.  NB: an additional sample of around 400 people will be	Random sample from Padron	Population register (Padron) & contacts obtained in Senegal

<sup>3</sup> For more details, see : Beauchemin, C. and A. Gonzalez-Ferrer (2011). "Sampling international migrants with origin-based snowballing method: New evidence on biases and limitations." *Demographic Research* 25(3): 103-134.

Country	Target areas	Sample size	Quotas	Recruitment methods
		added, thanks to a new survey round carried out in 2010.		
<b>MAFE-Congo</b>				
Belgium	Whole country	279 (45% females), including undocumented migrants - at the time of the survey: 10% - in the past: 33% 87.5% have lived at least one year in the region of Kinshasa	By age, gender and place of residence	Public spaces, migrant associations, churches, snowballing, phonebook, centers for asylum seekers, interviewers' contacts
United Kingdom	Whole country	149 (50% females), including undocumented migrants - at the time of the survey: 12% - in the past: 52% 93.3 % have lived at least one year in the region of Kinshasa	By age, gender and place of residence	Public spaces, churches, snowballing, interviewers' contacts
<b>MAFE-Ghana</b>				
The Netherlands	3 cities (in 3 different provinces): Amsterdam(North Holland); The Hague (South Holland); Almere (Flevoland)	272 (47% females), including undocumented migrants - at the time of the survey: 19% - in the past: 56% 72.5% have lived at least one year in the greater region of Accra or Kumasi area	By age and gender	Public spaces, churches, snowballing, interviewers' contacts
United Kingdom	Whole country	149 (48% of females), including undocumented migrants - at the time of the survey: 7% - in the past:14% 79.2% have lived at least one year in the greater region of Accra or Kumasi area	By age, gender and place of residence	Public spaces, churches, snowballing, interviewers' contacts

MAFE Methodological Report(2): 26. <b>NB:</b> Numbers in this table are smaller than in the cited report because some individuals were dropped to comply more strictly with the selection criteria.</p> <p><sup>1</sup> Non-weighted percentage of respondents who reported not holding a residence permit at the time of the survey.</p> <p><sup>2</sup> Non-weighted percentage of respondents who reported not holding a residence permit at some point in their migrant life for a period of at least one year (i.e. at the time of the survey or sometime in the past when they were living out of their origin country).</p>				

## 4.2 Sampling and weighting variables

This section provides a description of the weighting and stratification variables available in the datasets. More detailed information on the weighting methodology can be found in: Schoumaker, B., C. Mezger, N. Razafindratsima and A. Bringé (2013). Sampling and Computation Weights in the MAFE Surveys. MAFE Methodological Note 6: 73.

### 4.2.1. Selection variables

**Flag variables** have been introduced to mark some individuals who did not comply totally the full set of selection criteria (Table 4).

**Table 4. Flag variables on selection criteria (biographic datasets)**

Name of the flag variable	Dataset	Description	Number of individuals for which flag_*=1
flag_age	qb_general	The migrant is younger than 25 or older than 75 at the time of the survey. 0 : no / 1 : yes	7 individuals in Ghana 4 individuals in Senegal Note: these individuals have ages very close to the 25-75 age limits.
flag_arrival	qb_migration qb_house_period	The migrant (current or returnee) first arrived in Europe before age 18. 0 : no / 1 : yes	7 individuals in Ghana 9 individuals in Senegal 13 individuals in DR Congo
flag_visitor	qb_general	The migrant was living in Europe at the time of the survey, but was surveyed in Africa during a visit. 0 : no / 1 : yes	3 individuals in Senegal Note : in these cases, id_country=country of residence in Europe (even though the questionnaire was completed in Senegal)

The “**source**” variable indicates the source through which individuals were sampled in the field. The respondent selection method varies according to the country, which explains why some categories of the “source” variable are absent in some files, as shown in the following table

Individuals sampling source (categories of the “source” variable)	MAFE-Senegal		MAFE-Congo		MAFE-Ghana	
	In Senegal	In Europe	In Congo	In Europe	In Ghana	In Europe
Household in Africa	Yes	Yes*	Yes	No	Yes	No
Snow-balling	No	Yes	No	Yes	No	Yes
Public place	No	Yes	No	Yes	No	Yes
Association	No	No**	No	Yes	No	Yes
Interviewer's contact	No	No**	No	Yes	No	Yes
Padron	No	Yes (only in Spain)	No	No	No	No
Other	No	Yes**	No	Yes	No	Yes

\* Some migrants in Europe were found thanks to contacts obtained in Dakar from the surveyed households.  
 \*\* Some Senegalese migrants in France and Italy were selected through associations and contacts. They belong to the “Other” category.

### 4.2.2. Stratification variables

In African countries, the samples were stratified at 3 levels. The following stratification variables are made available:

**Table 5. Stratification variables in African countries**

Level of stratification	Variable name	variable description
<b>Level 1 Survey Area</b>  (available in Household and Biographic datasets)	strata_area	- In <b>Senegal</b> , 10 strata of equal size (equal number of districts) defined according to migration prevalence in each survey area (proportion of households with at least one migrant according to the 2002 Census).  Strata 1 grouped districts where the proportion of households with migrants abroad varied from 0 to 1%. Strata 2: 1.1 to 5.4%. Strata 3: 5.5 to 7.4%. Strata 4: 7.5 to 9.2%. Strata 5: 9.3 to 10.7%. Strata 6: 10.8 to 12.6%. Strata 7: 12.7 to 14.7%. Strata 8: 14.8 to 17.3%. Strata 9: 17.4 to 21.6%. Strata 10: 21.7 to 100%.  - In <b>Congo</b> , 3 strata defined according to migration prevalence in each survey area, as reported by knowledgeable persons (1= High level of migration ; 2 = Medium level ; 3= low level)  - In <b>Ghana</b> , region area (1=Accra ; 2=Kumassi)
<b>Level 2 Household</b>  (available in Household and Biographic datasets)	strata_hh	Stratification by household migrant status according to the screening survey. Note: the household migrant status in the screening survey may be different from what was actually observed in the household survey (see the following variables: hmidtot and hmidtret)  - in <b>Senegal</b> : 0=non migrant HH ; 1= HH with returnee(s) or migrant(s) abroad  - in <b>Ghana and Congo</b> : 0=HH with no migrant ; 1=HH with returnee(s) ; 2=HH with current migrants
<b>Level 3 Individual</b>  (available only in the Biographic datasets)	strata_ind	In all African countries, 3 strata according to the individuals' migratory status. The categories are the following: 1 = return migrants ; 2= spouse of a migrant ; 3 = Other non migrant. See section 4.1.2.  Note: may be different from what was actually observed in the individual data (see section 7.2.1 about the following variables: migr_cur, migr_ret, migr_cjt, migr_no)

#### 4.2.3. Clustering variables

Respondents are clustered at several levels. The following table indicates the name and nature of the clustering variables, and also the datasets in which they are available.

Variable name	variable description	Availability of the variables		
		Household data	Biographic data	
			Africa	Europe
id_country	Identifier of the country where the data was collected: Es=Spain, Fr=France, It=Italy, Sn=Senegal, B=Belgium, C=Congo, G= Ghana, N=Netherlands, U=United Kingdom	NO	YES	YES
regionenq	Identifier of the region where the data was collected	NO	YES	YES
num_dr	Identifier of the primary sampling unit (PSU, census district in Senegal).	YES	YES	NO

#### 4.2.4. Weighting variables

Four weighting variables are available in the MAFE datasets, one related to the household data and three others to the individual data. All weights are normalized, i.e. the sum of the weights is equal to the sample size.

**Household sample.** The variable **weight\_hhd** represents normalized weights to be used in the analyses related to the household data, whatever the file used.

**Biographic sample.** There are three different weight variables in the data files of the MAFE individual surveys. They were computed at three different levels:

- **weight\_ctry** is the variable to use when working on a single country (for example, the Senegalese population sampled only in Senegal, or in any single European country).
- **weight\_eur** is the variable to use when working on the European countries pooled together (for example, the Senegalese population sampled in France, Italy and Spain). It should not be used if the analyses include individuals surveyed in Africa.
- **weight\_all** is the variable to use when working on all countries of a flow-specific MAFE survey (for example, Senegalese population from Senegalese, French, Italian and Spanish samples).

For details on weight computation see Schoumaker et al. (2013, op. cit.), a document that also provides information on when and how to use weights with the MAFE data.

Table 6 provides a full description of weight variables.

**Table 6. Weight variables description**

Dataset	Weight name	To be used for analyses on...	Sum	Number of missing values	Variation coefficient (%)	Min	Max
MAFE-Senegal							
Household	weight_hhd	Households	1,141	0	81.5	0.09	4.02
Biographic	weight_all	All African and European countries together (Senegal, France, Italy and Spain)	1,668	0	131.0	0.04	7.22
	weight_eur	All European countries together (France, Italy and Spain)	606	1062	65.9	0.12	2.93
	weight_ctry	Spain	200	0	111.4	0.16	3.85
		France	201	0	27.5	0.72	1.45
Italy		205	0	57.8	0.15	1.66	
Senegal		1,062	0	110.4	0.05	5.27	
MAFE-Congo							
Household	weight_hhd	Households	1,576	0	133.0	0.06	5.47
Biographic	weight_all	All African and European countries together (Congo, UK and Belgium)	2,066	0	153.9	0.02	6.52
	Weight_eur	All European countries together (UK and Belgium)	428	1638	43.6	0.23	1.72
	weight_ctry	Belgium	279	0	44.3	0.61	1.86
		United Kingdom	1,638	0	32.0	0.18	1.35
Congo		149	0	119.5	0.05	5.26	

Dataset	Weight name	To be used for analyses on...	Sum	Number of missing values	Variation coefficient (%)	Min	Max
<b>MAFE-Ghana</b>							
Household	weight_hhd	Households	1,246	0	117.55	0.09	8.20
Biographic	weight_all	All African and European countries together (Ghana, UK and Netherlands)	1,666	0	153.1	0.02	9.09
	weight_eur	All European countries together (UK and Netherlands)	422	1247	115.6	0.09	3.75
	weight_ctry	Netherlands United Kingdoms Ghana	273 149 1,244	0 0 0	44.1 30.0 132.0	0.43 0.62 0.07	1.64 1.54 7.4

## 5 FROM THE QUESTIONNAIRES TO THE DATASETS

Looking at the questionnaires is a good way to enter into the details of the MAFE data<sup>4</sup>. However, users must be aware that some of the information contained in the questionnaires was sometimes transformed for delivery in the datasets. Differences between the questionnaires and the datasets are explained in this section.

### 5.1 Language

The questionnaires are available in 4 languages. The life event history questionnaires were completed in French, English, Spanish and Italian, but the household questionnaires in French and English only.

Databases are delivered in English. However labels are available in English and French. Users of the Stata software can switch from one language to the other using the “mlanguage package” (available since Stata v10).

How to install this package:

- in your command window: enter `help mlanguage`
- a new window opens and proposes to install the “mlanguage package”
- click on the link and wait for the installation

Some basic things to know about the `mlanguage` command:

---

<sup>4</sup>Questionnaires are available at: <http://mafeproject.site.ined.fr/en/methodo/methodo/>

- if you enter `mlanguage`: Stata will tell you how many languages you can use for the table and the name of these languages. Here you will just have “fr” for French and “en” for English. Using this command, you will also know which language is activated.
- if you enter `mlanguage select fr` or `label language fr`: you choose to use French (en for English).

**WARNING:** if you merge files that have a different language, you will end up with a new file in which French and English will be mixed.

## 5.2 The yes-no answers

All “yes” / “no” answers have been recoded, in order to facilitate analyses.

**Table 7. Coding of “Yes”/“No” answers**

Meaning of the code	DATASET code	QUESTIONNAIRE code
Yes	1	1
No	0	2

## 5.3 Non-response codification

In the questionnaires, codes were used to distinguish the reasons why respondents did not answer certain questions. In the datasets (Stata format), these codes have been converted into various sorts of specific missing data (see Table 8).

**Table 8. Non-response modalities**

Meaning of the code	DATASET code	QUESTIONNAIRE code
No answer expected	.	.
Refusal to answer	.a	7777
No answer given	.b	8888
Don’t know	.c	9999

**WARNING FOR STATA USERS:** “.a”, “.b”, “.c” have the same status as “.”; so if you make a simple request such as: ***tab q106***, you will not have the answers with “.”, “.a”, “.b”, “.c”. To include them in your request you must use: ***tab q106, mis***.

Example:

```
tab q106
```

At the beginning of this relationship she/he was	Freq.	Percent	Cum.
Single, never married	1,676	80.35	80.35
Married	250	11.98	92.33
Separated/Divorced	137	6.57	98.90
Widowed	23	1.10	100.00
Total	2,086	100.00	

```
tab q106, mis
```

At the beginning of this relationship she/he was	Freq.	Percent	Cum.
Single, never married	1,676	71.41	71.41
Married	250	10.65	82.06
Separated/Divorced	137	5.84	87.90
Widowed	23	0.98	88.88
.	246	10.48	99.36
Refuse to answer	3	0.13	99.49
No answer	12	0.51	100.00
Total	2,347	100.00	

```
tab q106, mis nolabel
```

At the beginning of this relationshi p she/he was	Freq.	Percent	Cum.
1	1,676	71.41	71.41
2	250	10.65	82.06
3	137	5.84	87.90
4	23	0.98	88.88
.	246	10.48	99.36
.a	3	0.13	99.49
.b	12	0.51	100.00
Total	2,347	100.00	

**WARNING FOR SPSS USERS:** when the database is imported from Stata to SPSS, “.a”, “.b” and “.c” take the value “.”

**WARNING FOR SAS USERS:** “.a” , “.b” and “.c” take the value “A”, “B”, “C”

Example:

```
proc freq data=vm.sn_qb_union_130419;
table q106 / missing;
```

run;

At the beginning of this relationship he/he was				
q106	Frequency	Percentage	Cum. Frequency	Cum. Percentage
.	246	10.48	246	10.48
A	3	0.13	249	10.61
B	12	0.51	261	11.12
1	1676	71.41	1937	82.53
2	250	10.65	2187	93.18
3	137	5.84	2324	99.02
4	23	0.98	2347	100.00

## 5.4 Multiple answers

Some questions could be answered with several items (multiple-answer questions). Each of these questions has been transformed into a set of dichotomous variables in the datasets in which each possible answer (item) is a dichotomous variable (0 = No; 1 = Yes).

Example:

Let's look at the q307 question "When you arrived in this house you lived with..." Eleven answers were simultaneously possible, plus the "non-response modalities" (7777 = Refusal to answer; 8888 = No response; 9999 = Does not know). In the datasets, 2 formats are available:

- In the variable q307, all answers appear in the same field, as a list of modalities. Ex: if the person lived with her/his father (modality 1), her/his mother (modality 2) and her/his sisters (modality 5), we can see: "1 2 5".
- In addition, 12 variables q307\_x are also available, in which x corresponds to the code of each modality (see Table 9)

**Table 9. Dichotomous variables for multiple answers (Example: question Q307)**

Variable name	variable type	variable description
q307_0	Dichotomous. 2 modalities: 0=no; 1=yes.	Ego lives alone
q307_1	Dichotomous. 2 modalities: 0=no; 1=yes.	Ego lives with her/his father
q307_2	Dichotomous. 2 modalities: 0=no; 1=yes.	Ego lives with her/his mother
q307_3	Dichotomous. 2 modalities: 0=no; 1=yes.	Ego lives with her/his partner(s)
q307_4	Dichotomous. 2 modalities: 0=no; 1=yes.	Ego lives with her/his brother(s)
q307_5	Dichotomous. 2 modalities: 0=no; 1=yes.	Ego lives with her/his sister(s)
q307_6	Dichotomous. 2 modalities: 0=no; 1=yes.	Ego lives with her/his son(s)
q307_7	Dichotomous. 2 modalities: 0=no; 1=yes.	Ego lives with her/his daughter(s)
q307_8	Dichotomous. 2 modalities: 0=no; 1=yes.	Ego lives with another relative
q307_9	Dichotomous.	Ego lives with a friend(s)

Variable name	variable type	variable description
	2 modalities: 0=no; 1=yes.	
q307_10	Dichotomous. 2 modalities: 0=no; 1=yes.	Ego lives with another person(s)
q307_NR	Dichotomous. 2 modalities: 0=no; 1=yes.	Ego did not answer this question

NB: the same approach has been used for the questions q407, q509, q514, q515, q610, q614, q615, q616, q617, q619, q707, q708, q805, b1, b3, c5, c6, c8, e4, e6, e15, e17, e20, e24, e27.

## 5.5 String variables

Some string variables are not completely clean (they may mix several languages, contain spelling errors, be incompletely coded...). This is especially true for location variables. However, all string variables are made available for users who might be interested by their content.

## 6 HOUSEHOLD DATASETS

The data collected with the household questionnaires have been arranged into two distinct sorts of datafiles: one contains the household-level information (qm\_household), such as variables related to housing conditions; the other contains the information concerning the individuals (members of the household and external persons) listed in the roster. The two following sections present these datasets in detail.

**Table 10. List of the household datasets**

Dataset	Level of observation	Identifying	Modules in the questionnaire	Number		
				Senegal	Ghana	Congo
qm_household	Household	n_menage	modules E & O	1,141	1,246	1,576
qm_indiv	All individuals cited in the HH questionnaire, including people who do not live in the household	Ident*	all modules	12,35	7,135	15,588
* In addition, the variable n_indiv identifies each individual within his/her household. Usually, n_indiv=1 for the household heads.						

### 6.1 Qm\_household

#### 6.1.1. Observations

The “Qm\_household” files contain one line per household, i.e. a total of 1,246 HH in Ghana, 1,576 in Congo and 1,141 in Senegal.

### 6.1.2. Variables list

The dataset contains information on:

- HH characteristics (computed variables from modules A & B, see the list in Table 11; the stata codes used to create these variables are given in the codebooks)
- HH head characteristics: all variables from module A, and computed variables created for the dataset “qm\_indiv” (Variables names: hh\_a1 to hh\_a21).
- Housing and assets of the HH head (module E)
- Information on the conduct of the interview (module O).

**Table 11. Computed variables in Qm\_household**

Variable	Label / Description	Dichotomous Variables (0: No ; 1: yes)
hh_*	All HH head characteristics. The star (*) is replaced by the name of all variables contained in qm_indiv	-
hhmember	Total number of persons of the HH (living in or outside)	No
hmember	Total number of persons living in the HH (excluding the persons declared as living outside the HH, A4=2)	No
hchildin	Total number of children of the HH head living in the HH	No
hchild04	Total number of children aged 0-4 living in the HH	No
hchild511	Total number of children aged 5-12 living in the HH	No
hchild12	Total number of children aged 12+ living in the HH	No
hchildout	Total number of children of the HH head living outside the HH	No
hmigchild	Total number of children of HH head living abroad	No
hmigsons	Total number of sons of the HH head living abroad	No
hmigdaughters	Total number of daughters of the HH head living abroad	No
hspout	Total number of partners of the HH head living outside the HH, whatever the country of residence (Congo, Ghana, Senegal or other)	No
hmigspcm	Total number of partners of the HH head living abroad	No
hmigspot	Total number of partners (of the HH head or of the other members of the HH) living abroad	No
hmigoother	Total number of persons living abroad and maintaining regular contact with the HH during the 12 months before the survey (excluding the other migrants category – partners, children)	No
hmigtot	Total number of persons living outside Senegal, whatever the country of residence (hmigoother + hmigspot + hmigchild)	No
hmigafr	Total number of HH members living in Africa, excluding Congo, Ghana or Senegal	No
hmigeur	Total number of HH members living in Europe	No
hmigreste	Total number of HH members living outside Congo, Ghana, Senegal, neither in Africa, nor in Europe	No
hmigret	Total number of migrants back in the HH (individuals which have lived abroad for at least one year)	No
hreturn	HH with return migrants	Yes
hmigrant	HH with actual migrants	Yes
hnonmig	HH which have never had migrants	Yes
hworkers	Number of persons of the HH in employment (A19=1)	Yes

hrtocc	Housing density (persons per room)	Yes
hhwealth	Wealth index of the HH	Yes
hnucleus	Total number of nuclei in the HH. NB: available only in Senegal	Yes

## 6.2 Qm\_indiv

### 6.2.1. Observations

The file contains one line per individual declared in the HH questionnaire, i.e. a total of 7,135 individuals in Ghana, 15,588 in Congo and 12,350 in Senegal. Observations in this data file correspond to:

- Individuals living in the household at the time of the survey (A4=1)
- Individuals living outside the household (A4=2) included in the roster if they enter into one of the following categories:
  1. children of the HH head who no longer live with her/him, whatever her/his place of residence;
  2. partners of household members who live outside Congo, Ghana or Senegal;
  3. Mother and father of household members who live outside Congo or Ghana (NB: this category does not exist in the Senegalese questionnaire);
  4. other people living outside Congo, Ghana or Senegal and who had regular contact with the household during the 12 months before the survey.

**WARNING!** Don't forget that only some of the people listed in the household questionnaires, i.e. in "qm\_indiv" are actual members of the households.

Furthermore, keep in mind that some individuals, in this dataset, have never lived in Congo, Ghana or Senegal. For example:

- Descendants of migrants, born in the destination country of their parents. Ex: the HH head is a grandfather whose son migrated to France, where he had children. These children can be mentioned by the grandfather in the third category "other persons living outside Senegal but who have maintained regular contact with the HH during the 12 months before the survey", even if they have never lived in Senegal.
- Relatives of immigrants in Congo, Ghana or Senegal. Ex: the HH head is an immigrant woman from Angola. She has left behind (in her home country) her husband and children. Even if they have never lived in Congo, she mentioned them in the HH questionnaire because they are in the third category.

### 6.2.2. Variables

The "qm\_indiv" files contain all variables of the questionnaire, and some additional computed variables (see the list in Table 12, and the stata codes used to create these variables in the codebooks).

**Table 12. Computed variables in Qm\_indiv**

Variable	Label / description	Dichotomous Variables (0: No ; 1: yes)
pmigrant	Current migrants: individuals outside HH living abroad	Yes
pmig_country	Country of residence of the current migrants	No
pmig_region	Residence region of the current migrants (Africa, Europe, other)	No
preturn	Return migrants: members of the HH who have lived at least on year abroad, whatever the country. Note that they may be abroad at the time of the survey (individuals who re-emigrated)	Yes
pretout	Current return migrants who are in Congo, Ghana or Senegal at the time of the survey	Yes
peverreturn	Actual migrants who have already come back to Congo, Ghana or Senegal	Yes
pimmig	Individuals who have immigrated to Congo, Ghana or Senegal, i.e. who were born abroad but came to settle there (whatever their nationalities)	Yes
hhmember	Total number of persons of the HH (living in or outside)	No
hmember	Total number of persons living in the HH (excluding the persons declared as living outside the HH, A4=2)	No
childhh	Children of the HH head living in the HH (including fostered and adopted children in Congo and Ghana)	No
hchildin	Total number of children of the HH head living in the HH	No
childage	Age class of the HH head children living in the HH (1 = from 0 to 4; 2 = from 5 to 12; 3 = more than 12)	No
hchild04	Total number of children aged 0-4 living in the HH	No
hchild511	Total number of children aged 5-12 living in the HH	No
hchild12	Total number of children aged 12+ living in the HH	No
childouthh	Children of the HH head living outside the HH	Yes
hchildout	Total number of children of the HH head living outside the HH	No
migchild	Children of the HH head living abroad	Yes
hmigchild	Total number of children of HH head living abroad	No
migs	Son of the HH head living abroad	Yes
hmigsons	Total number of sons of the HH head living abroad	No
migd	Daughter of the HH head living abroad	Yes
hmigdaughters	Total number of daughters of the HH head living abroad	No
out_spouse	Partner of the HH head living outside the HH	Yes
hspout	Total number of partners of the HH head living outside the HH, whatever the country of residence (Congo, Ghana, Senegal or other)	No
migspouse	Partner of the HH head living abroad	Yes
hmigspcm	Total number of partners of the HH head living abroad	No
migsp_any	Partner of someone in the HH living abroad	Yes
hmigspotot	Total number of partners (of the HH head or of the other members of the HH) living abroad	No
hmigoother	Total number of persons living abroad and maintaining regular contact with the HH during the 12 months before the survey (excluding the other migrants category – partners, children)	No
hmidtot	Total number of persons living outside Senegal, whatever the country of residence (hmigoother + hmigspotot + hmigchild)	No
hmigafr	Total number of HH members living in Africa, excluding Congo, Ghana or Senegal	No
hmigeur	Total number of HH members living in Europe	No

hmigreste	Total number of HH members living outside Congo, Ghana, Senegal, neither in Africa, nor in Europe	No
hmigret	Total number of migrants back in the HH (individuals which have lived abroad for at least one year)	No
hreturn	HH with return migrants	Yes
hmigrant	HH with actual migrants	Yes
hnonmig	HH which has never had migrants	Yes
worker	Individual in employment	Yes
hworkers	Number of HH members in employment (A19=1)	No
hnucleus	Total number of nuclei in the HH.NB: only in Senegal	No

## 7 BIOGRAPHIC DATASETS

Within each MAFE dataset (MAFE-Congo, MAFE-Ghana, MAFE-Senegal), the biographic dataset comprises 18 different files, each one corresponding to a module of the life event history questionnaire. The next section provides information on the general features of these various files and the following ones detail the content of each file.

### 7.1 General features

#### 7.1.1. Observations

##### (i) Number of observations

Except the “qb\_general” files, all biographic files are period-persons files, in which observations correspond to spells, events or states. In other terms, the biographic data show the respondents' trajectories in various domains explored in the questionnaire (family, occupation, housing, etc.).

All surveyed individuals are present in each file (even if they did not experienced an event of interest in the corresponding module). However, the number of observations may vary across individuals. For instance, in the file dedicated to children, a respondent who had 3 children will appear three times and a respondent who had 5 children will appear 5 times (one line per child). A respondent who had no children will appear only once (with missing values in the variables describing the children). Table 13 shows the total number of observations in each biographic file.

**Table 13. Biographic datasets description**

Dataset name	From the questionnaire to the dataset <sup>1</sup>	Identifier Observation	Type of trajectory <sup>2</sup>		Number of events and Observations <sup>3</sup>			
		Rank of the event or state	Possible temporal overlapping	Continuous trajectory		Congo	Ghana	Senegal
qb_union	From columns to lines	num_union	Yes	No	Events	2,083	2,459	2101
					Obs.	2,425	2,598	2,347

Dataset name	From the questionnaire to the dataset <sup>1</sup>	Identifier Observation	Type of trajectory <sup>2</sup>		Number of events and Observations <sup>3</sup>			
		Rank of the event or state	Possible temporal overlapping	Continuous trajectory		Congo	Ghana	Senegal
qb_children	From columns to lines	num_enf	Yes	No	Events	7,522	3,977	4,890
					Obs.	7,897	4,375	5,295
qb_house	From columns to lines	num_log	No	Yes	Events	10,361	7,784	7,124
					Obs.	10,361	7,784	7124
qb_activity	From columns to lines	num_per	No	Yes	Events	9,906	8,148	7,293
					Obs.	9,906	8,148	7,293
qb_assets	From columns to lines	num_prop	Yes	No	Events	1,882	1,449	1,031
					Obs.	2,884	2,241	2,097
qb_migration	From columns to lines	num_mig	No	No	Events	1,122	1,043	1,209
					Obs.	2430	1958	2064
qb_return	From columns to lines	num_sr	No	No	Events	400	417	320
					Obs.	2,103	1,717	1,729
qb_mig_attempts	From columns to lines	num_tent	Yes	No	Events	233	191	243
					Obs.	2,107	1,707	1,729
qb_short_return	Complex transformation	num_sh_ret	No	No	Events	427	933	1,31
					Obs.	2,299	2,263	2,57
qb_short_stay	Complex transformation	num_stay	No	No	Events	1,946	1,179	1,470
					Obs.	1,946	2,428	2,642
qb_citizenship	Complex transformation	num_nat	No	Yes	Events	2,292	1,794	1,775
					Obs.	2,292	1,857	1,775
qb_asylum	Complex transformation	num_asyl	Yes	No	Events	276	21	12
					Obs.	2091	1673	1671
qb_residence_permit	Complex transformation	num_rp	Yes	No	Events	1,45	1,406	1,544
					Obs.	2798	2381	2447
qb_work_permit	Complex transformation	num_wp	Yes	No	Events	1,399	1,355	1,291
					Obs.	2,753	2,335	2,221
qb_transfer	From columns to lines	num_transr	No	No	Events	611	536	645
					Obs.	2,190	1,731	1,735
qb_association	From columns to lines	num_coti	No	No	Events	125	206	153
					Obs.	2,080	1,688	1,680
qb_network	Complex transformation	num_netmig	Yes	No	Events	9,928	5,994	6,442
					Obs.	9,928	6,429	6,690

<sup>1</sup> For more details, see section 7.1.2.  
<sup>2</sup> For more details, see section 7.1.3.  
<sup>3</sup> Interpretation: Example: MAFE-Congo, qb\_union - 2,425 observations are recorded, including observations with missing information of respondents who never had a partnership. 2,083 unions (or partnerships) are actually recorded. Note that a same individual can have several partnerships either successively or at the same time (see column “possible temporal overlapping”).

## (ii) Start and end dates

All observations are ordered following their date of occurrence. In every biographic datafile,

- a variable, named “**num\_\***”, indicates the rank of the event (or state) in the respondent's life (see Table 13 for the exact name of the variable in each dataset). Two variables indicate the start and end dates of the event (or state):
- All variables corresponding to start dates are named “**qxxx<sub>d</sub>**” (xxx corresponding to the number of the question, and “d” standing for “début” in French)
- All variables corresponding to end dates are named “**qxxx<sub>f</sub>**” (xxx corresponding to the number of the question, and “f” standing for “fin” in French)

**NB :** “**qxxx<sub>f</sub>**” is **missing** when the period has not ended, i.e. when the situation described by the data is the situation at the time of the survey (for an example, see the dataset excerpt in the next section).

### 7.1.2. From the questionnaire modules to the datasets

In most modules of the life event history questionnaire, each event or state is recorded in a column and each variable (question) corresponds to a line. This structure is reversed in the datasets, where each event (or state) represents a line and each variable a column. This transformation from the questionnaire to the datasets is illustrated in the next example:

#### Example:

Questionnaire excerpt:

MODULE ASSOCIATIONS		ident = F106		SEE THE GRID COLUMN 14	
1700 – Count in the grid the number of periods Ego paid contributions to ASSOCIATIONS: [ 0 ] [ 2 ] and fill in one column for each period					
	1st Contribution	2nd Contribution	3rd Contribution	4 <sup>th</sup> Contribution	5 <sup>th</sup> Contribution
1701D – 1701F – Start and end years of contribution payments <i>Cross out if ongoing</i>	[ 9 ] [ 0 ] Start End	[ 0 ] [ 4 ] [ / ] [ / ] Start End	[ ] [ ] [ ] [ ] Start End	[ ] [ ] [ ] [ ] Start End	[ ] [ ] [ ] [ ] Start End

In this module (above), each spell of contribution to a migrant association corresponds to a column. In the dataset (below), each spell is a line.

Dataset excerpt:

	ident	num_coti	q1701d	q1701f	q1	age_survey	q1a	q18
1	F106	1	1990	1995	woman	43	1966	5th year(DESS,DEA or equivalent)
2	F106	2	2004	.	woman	43	1966	5th year(DESS,DEA or equivalent)
3	F107	.	.	.	Man	26	1983	2nd year high school
4	F137	1	2004	2005	Man	36	1973	2nd year high school
5	F137	2	2007	2008	Man	36	1973	2nd year high school

**q1701d** is the start date of each contribution period, while **q1701f** is the end date and **num\_coti** the rank of each contribution period for each individual. The file excerpt shows 3 distinct cases:

- The individual F106 joined associations twice. Between 1990 (q1701d) and 1995 (q1701f), and since 2004 (q1701f= “.” Indicates that the situation is still valid at the time of the survey). In between, he was not affiliated, as shown by the time gap between the observations. Num\_coti is the identifier of each period of contribution to an association.
- The individual F107 never joined an association (all variables describing association participation are missing)

- As F106, the individual F137 joined an association twice. Between 2000 and 2005, and then between 2007 and 2008. He left this association in 2008, before the time of the survey.

This type of transformation applies to most modules of the life event history survey. Some modules required different transformations. They are listed as “complex” in Table 13 and their transformation is fully explained in module-specific sections.

### 7.1.3. Different types of trajectories

The shape of the individual trajectories varies according to the subject of the file (or questionnaire module). Three types of trajectories can be found in the biographic MAFE datasets. Examples are given in the next sections. Table 13 shows what type of trajectory each file pertains to.

#### (i) Discontinuous trajectories

A trajectory is discontinuous when there may be a time gap between 2 observations of a same individual. The association module (qb\_association file) provides a good example of this kind of file (see the example in the previous section).

#### (ii) Continuous trajectories

A trajectory is continuous when there is no possible time gap between 2 observations of a same individual. For example, all respondents always lived somewhere (usually in only one place). Thus their housing history is continuous: each spell of residence is immediately followed by another one. In continuous datafiles, for a one individual, the end date of an observation always corresponds to the start date of the next . In other terms:  $qxxx(t+1) = qxxx(t)$ .

#### Example:

Excerpt of a “qb\_house” file

ident	num_log	q301d	q301f	loc_house	q302
E2	1	1968	1998	Regional city	SENEGAL
E2	2	1998	1999	Abroad	MAURITANIA
E2	3	1999	.	Abroad	SPAIN

The individual E2 had three spells of residence. His first dwelling was in Dakar (Regional city of Senegal), where he lived from his birth in 1968 (q301d, start date) until 1998 (q301f end date). At this point (1998), he moved to Mauritania where he stayed until 1999. Then he migrated to Spain, where he was still living at the time of the survey.

#### (iii) Temporal overlapping

Temporal overlapping occurs when 2 observations overlap in the trajectory of one individual. For example: an individual can have 2 children at the same time; but he cannot declare 2 simultaneous places of residence (respondents had to declare their main place of residence). Similarly, in case of polygamy, one individual can have 2 partners at the same time. There may therefore be cases of temporal overlapping between two observations of a

same individual in the “qb\_union” file. In this kind of dataset, more than one event (or state) may occur at the same time.

### Example:

Excerpt of a “qb\_children” dataset

	ident	num_enf	id_enf	q201n	q201d	q202
1	E40	1	E_E401	1997	.	1
2	E40	2	E_E402	1999	.	2
3	E40	3	E_E403	2005	.	3
4	E40	4	E_E404	2006	2007	4

Here, the individual E40 had her first child (E\_E401) in 1997, the second (E\_E402) in 1999, the third (E\_E403) in 2005, and the last one (E\_E404) in 2006. The three older children were still alive at the time of the survey (q201d is missing), but the last one died in 2007.

### *7.1.4. Variables common to all biographic datasets*

All biographic files contain the variables included in the corresponding module of the questionnaire. In addition some basic variables are also available in every biographic file. Table 14 provides the list of these variables.

**Table 14. List of variables included in every biographic file**

Variable	Description
ident	Biographic individual identifier
n_indiv	ID of the individual in the HH (only for individuals who were recorded in the HH roster)
n_menage	ID of the HH (only for individuals who were recorded in the HH roster)
q1	Sex
age	Age at survey
q1a	Year of birth
q18	Educational level (Which is the last school year you attended?)
num_dr	Identifier of the primary sampling unit (PSU, census district in Senegal).
strata_area	Stratification variable – Level 1 (see Table 5)
strata_hh	Stratification variable – Level 2 (see Table 5)
strata_ind	Stratification variable – Level 3 (see Table 5)
id_country	Country of the survey
flag_age	Age below 25 years and above 75 years
flag_visitor	Resident in Europe but surveyed in Africa (only in MAFE-Senegal)
flag_arrival	First migration in Europe before age 18
weight_ctry	Weight for country specific analyses (see section 4.2.4, p.17)
weight_eur	Weight for analyses on all European countries of a specific flow (see section 4.2.4, p.17)
weight_all	Weight for analyses on all countries of a specific flow (see section 4.2.4, p.17)

### 7.1.5. Combining different biographic datasets

Analysing MAFE data usually involves assembling different files corresponding to different trajectories. For instance, to study the influence of migration experience on investments it is necessary, at the very least, to assemble the file describing residential trajectories and the file describing the respondent's investments in durable assets. Information from other files/modules should also be added if they influence the investment behavior<sup>5</sup>.

Table 15 provides the list of identifier variables that can be used to merge the different biographic files.

- In most cases, "**Ident**" is the identifier to use, in addition to the variables that serve to order the events (start and/or end dates)
- In addition, the variables "**id\_enf**" and "**id\_uni**" should be used to link the network module (on the location of the partners and children and other members of the respondent's social network) with the modules describing the respondents' family histories (partnerships / unions and children).

Note that a practical training module will be made available in 2014 to explain how to merge the MAFE biographic datasets.

**Table 15. Biographic datafiles identifier**

<b>Id variables</b>	<b>Description</b>	<b>Datasets</b>
ident	Biographic individual identifier (respondent)	All
id_uni	Union ID	Network Union Children
id_enf	Children ID	Network Children

## 7.2 Description of every biographic dataset

The files are described in the order of the questionnaire modules.

### 7.2.1. Qb\_general

**Observations:** 1 line per respondent.

**Variables:** This dataset contains variables that do not vary over time, i.e. answers to the introductory module of the questionnaire and to variables from the inter-modules section, plus some computed variables listed below.

---

<sup>5</sup> For an example of analysis on this topic, see : Mezger, C. and C. Beauchemin (2010). "The Role of International Migration Experience for Investment at Home: the Case of Senegal." MAFE Working Paper 12: 47.

**Table 16. Computed variables in Qb\_general**

Variable name	variable Kind	variable description
migr_cur*	Categorical variable	Current migrant in Europe at the time of the survey (0=No; 1=Yes)
migr_ret*	Categorical variable	Return migrant in Africa at the time of the survey (0=No; 1=Yes)
migr_cjt*	Categorical variable	Non migrant partner (living in Africa) of a migrant at the time of the survey (0=No; 1=Yes)
migr_no*	Categorical variable	Other non migrant (living in Africa) at the time of the survey (0=No; 1=Yes)
q19d_c1	Categorical variable	Coded variable on highest educational qualification from the open question q19d
q19d_c2	Categorical variable	Coded variable on highest educational qualification from the open question q19d
q19e_c1 (not in MAFE Senegal)	Categorical variable	Coded variable on the subject area of the highest educational qualification(from the open question q19e)
q19e_c2 (not in MAFE Senegal)	Categorical variable	Coded variable on the subject area of the highest educational qualification(from the open question q19e)
<p>* A same individual can be coded 1 in several of the migratory status variables; e.g. one individual can be both returnee and partner of a migrant at the time of the survey.</p> <p>NB: these variables may show different results from the stratification variable (strata_ind), whose content was determined by answers given by proxy respondents in the household surveys. These variables (migr_*, presented in this table) are computed using the information obtained in the life event history surveys.</p>		

### 7.2.2. Qb\_union

**Observations :** One line per union for the respondents who reported at least one union, in addition to one line per individual who had no partnership.

**Variables:** This dataset contains all the answers to the Union module, in addition to the following:

**Table 17. Computed variables in Qb\_union**

Variable name	variable Kind	variable description
id_uni	String variable	Variable computed from ident and num_union

### 7.2.3. Qb\_children

**Observations:** One line per child for the respondents who reported at least one child, in addition to one line per individual who had no child.

**Variables:** This dataset contains all the answers to the Children module , in addition to the following:

**Table 18. Computed variables in Qb\_children**

Variable name	variable Kind	variable description
---------------	---------------	----------------------

id_enf	String variable	Variable computed from ident and num_enf
id_uni	String variable	Variable computed from ident and q203

#### 7.2.4. Qb\_house

**Observations:** One line per home for each respondent (everybody had to report at least one home).

**Variables:** This dataset contains...

- All the answers to the Housing module.
- A series of dichotomous variables created from the question q307 (multiple answers, see section 5.4, p.22)

#### 7.2.5. Qb\_activity

**Observations:** One line per activity for all the respondents (everybody reports at least one activity).

**Variables:** This dataset contains

- All the answers to the Activity module.
- A series of dichotomous variables created from the question q407 (multiple answers, see section 5.4, p.22)
- And the following variables:

**Table 19. Computed variables in Qb\_activity**

Variable name	variable Kind	variable description
q403_c	categorical variable	Variable computed from the open question of q403.
isco	Categorical variable	International Standard Classification of Occupations Variable constructed (isco08) from q403. List of codes in Appendix 2.
isei	Categorical variable	International Socio Economic Index. Variable constructed from q403 [see Appendix 2]

#### 7.2.6. Qb\_assets

**Observations:** One line per property for each person who declared at least one property and one line per individual with no assets.

**Variables:** This dataset contains

- All the answers to the Assets & Business module.
- A series of dichotomous variables created from the questions q509, q514, q515 (multiple answers, see section 5.4, p.22)
- And the following variables:

**Table 20. Computed variables in Qb\_assets**

Variable name	variable Kind	variable description
q508c2	Categorical variable	Variable computed from the open question q508
q508c1	Categorical variable	Variable computed from the open question q508

### 7.2.7. Qb\_migration

**Observations:** One line per long & short stay outside Congo, Ghana or Senegal for each person who reports at least one stay and one line per individual who did no stay abroad.

**Variables:** This dataset contains

- All the answers to the module Long & Short Stays Outside Congo, Ghana or Senegal
- A series of dichotomous variables created from the question q610, q614, q615, q616, q617, q619 (multiple answers, see section 5.4, p.22)
- And the following variables:

**Table 21. Computed variables in Qb\_migration**

Variable name	variable Kind	variable description
q604c2	Categorical variable	Reasons for migration coded level 2 (from q604)
q604c1	Categorical variable	Reasons for migration coded level 1 (from q604)
q605c2	Categorical variable	Reasons for the choice coded level 2 (from q605)
q605c1	Categorical variable	Reasons for the choice coded level 1 (from q605)

### 7.2.8. Qb\_return

**Observations:** One line per return to Congo, Ghana or Senegal for each person who reported at least one return and one line for the other respondents. Note: returns listed in this module are returns that lasted at least 1 year and shorter returns but with the intention of settling. Other returns (less than a year without intention to resettle) are listed in the qb\_short\_return datafiles.

**Variables:** This dataset contains

- All the answers to the module Return to Congo, Ghana or Senegal.
- A series of dichotomous variables created from the question q707, q708 (multiple answers, see section 5.4, p.22)
- And the following variables:

**Table 22. Computed variables in Qb\_return**

Variable name	variable Kind	variable description
q706c2	Categorical variable	Reasons for return coded level 2 (from 706)
q706c1	Categorical variable	Reasons for return coded level 1 (from 706)

### 7.2.9. Qb\_mig\_attempts

**Observations:** One line per attempt for each person who reported at least one attempt and one line for the other respondents.

**Variables:** This dataset contains

- All the answers to the Migration Attempts module.
- A series of dichotomous variables created from the question q805 (multiple answers, see section 5.4, p.22)
- And the following variables:

**Table 23. Computed variables in Qb\_mig\_attempts**

Variable name	variable Kind	variable description
q803c2	Categorical variable	Reasons for migration coded level 2 (from q803)
q803c1	Categorical variable	Reasons for migration coded level 1 (from q803)
q804c2	Categorical variable	Reasons for the choice coded level 2 (from q804)
q804c1	Categorical variable	Reasons for the choice coded level 1 (from q804)
q806c2	Categorical variable	Reasons for attempt failure coded level 2. (from q806)
q806c1	Categorical variable	Reasons for attempt failure coded level 1 (from q806)
q807c2	Categorical variable	Reasons for stopping attempt coded level 2 (from q807)
q807c1	Categorical variable	Reasons for stopping attempt coded level 1 (from q807)

### 7.2.10. Qb\_short\_return

**Observations:** One line per return to Congo, Ghana or Senegal of less than a year for each person who declared at least one short return (without a resettlement intention) or one line for a multiple return period; and one line for all other individuals. A multiple return period is a period during which the respondent returned regularly to his/her country of origin. They can be identified by comparing the start and end dates: they differ in case of a multiple return period, whereas they are identical in case of a single short return.

**Variables:** This dataset contains all the answers to the module Return to Congo, Ghana or Senegal for less than a year.

### 7.2.11. Qb\_short\_stay

**Observations:** One line per stay of less than a year outside Congo, Ghana or Senegal for each person who reported at least one stay.

**Note:** If over a period of several years the respondent travels every year to one or several countries for the same reason, these stays are grouped on a single line (this a case of “multiple stays”).

**Variables:** This dataset contains all the answers to the module Stays of Less than a Year outside Congo, Ghana or Senegal

## From the questionnaire to dataset

### Questionnaire

	Start and end years	COUNTRY note in plain text	Motive		Start and end years	COUNTRY note in plain text	Motive

### 7.2.12. Qb\_citizenship

**Observations:** One line per citizenship for each person (everybody should have at least one citizenship).

**Variables:** This dataset contains the answers to the Citizenship module (q1200 etc.). Note that several variables have been renamed, as shown in the example below.

### From the questionnaire to the dataset

#### Questionnaire

1200 – Count in the grid the number of periods during which ego had one or several nationalities: 0 | 3

	Start and end years	Nationalities held in CAPITAL letters	
1200D – 1200F– Nationality or nationalities by birth	<u>5</u>   <u>4</u>   <u>8</u>   <u>7</u> Start End	N : <b>GHANA</b> .....	N : .....
1201D – 1201F – 1 <sup>st</sup> change <i>Cross out if no change</i>	<u>8</u>   <u>7</u>   <u>9</u>   <u>6</u> Start End	N : <b>UNITED KINGDOM</b> .....	N : .....
1202D – 1202F – 2 <sup>nd</sup> change <i>Cross out if no change</i>	<u>9</u>   <u>6</u>   <u>/</u>   <u>/</u> Start End	N : <b>NETHERLANDS</b> .....	N : <b>GHANA</b> .....
1203D – 1203F – 3 <sup>rd</sup> change <i>Cross out if no change</i>	<u> </u>   <u> </u>   <u> </u>   <u> </u> Start End	N : .....	N : .....

## Dataset

N034600	2	1987	1996	UNITED KINGDOM	.
N034600	3	1996	.	NETHERLANDS	GHANA

### 7.2.13. Qb\_asylum

**Observations:** One line per asylum application for each person who has made at least one application; and one line for the other individuals.

**Variables:** This dataset contains the answers to the Asylum module (Q1300 etc.). Note that several variables have been renamed, as shown in the example below.

#### From the questionnaire to the dataset

##### Questionnaire

1300 – Count in the grid the number of times ego sought asylum: [ ][ ]					
	Country where asylum was sought	Year of application	Year when refugee status was obtained <i>Cross out if not obtained</i>	Year when refugee status was denied <i>Cross out if not denied</i>	End year of refugee status <i>Cross out if no end year</i>
1301- 1 <sup>st</sup> application for asylum	1301P BELGIUM	1301D 9   3	1301O [ ][ ]	1301R 9   7	1301F [ ][ ]
1302- 2 <sup>nd</sup> application for asylum	1302P BELGIUM	1302D 9   7	1302O [ ][ ]	1302R 9   9	1302F [ ][ ]

### 7.2.14. Qb\_residence\_permit

**Observations:** One line per residence permit for each person who has had at least one permit; and one line for the other persons.

**Variables:** This dataset contains the answers to the Residence Permits module (Q1410, etc.). Note that several variables have been renamed, as shown in the example below.

## From the questionnaire to the dataset

### Questionnaire

MODULE RESIDENCE PERMITS		GRID COLUMN 11
1410 – Number of periods of residence status:   0   3		
	Start and end years <i>Cross out end date if status is ongoing</i>	Residence status <i>Encircle the status(es). If "other" indicate answer in plain text</i>
1411D – 1411F – 1st period of residence permit	7   7       7   8   Start                      End	V   RP   NP <b>NNRP</b>
1412D – 1412F – 2 <sup>nd</sup> period of residence permit	7   8       8   3   Start                      End	V <b>RP</b> NP   NNRP
1413D – 1413F – 3rd period of residence permit	8   3       8   4   Start                      End	<b>V</b> <b>RP</b> NP   NNRP

### Dataset

	ident	num_rp	nnrp	v	rp	np
1	G0471001	1	Yes	No	No	No
2	G0471001	2	No	No	Yes	No
3	G0471001	3	No	Yes	Yes	No

The “nnrp”, “v”, “rp”, “np” variables correspond to answers given to the questions in the “Residence and work permits” module. The corresponding labels in the French, Italian and Spanish questionnaires are the following:

	English	French	Spanish	Italian
No need Residence permit	NNRP	PBT	NEAR	NBTS
Visa	V	V	V	V
Residence Permit	RP	TS	AR	TS
No permit	NP	PT	SAR	NT

### 7.2.15. Qb\_work\_permit

**Observations:** One line per work permit for each person who has had at least one permit and one line for the others.

**Variables:** This dataset contains the answers to the Work Permits module (Q1510, etc.). Note that several variables have been renamed, as shown in the example below.

## From questionnaire to dataset

### Questionnaire

1510 – Number of periods of work permits:   0   3		
	<b>Start and end years</b> <i>Cross out end date if status is ongoing</i>	<b>Work status</b> <i>Encircle the status(es). If "other" indicate answer in plain text</i>
1511D – 1511F – 1st period of work permit	<div>7   7   7   8</div> <div>Start      End</div>	WP   NWP   SWP <b>NNWP</b>
1512D – 1512F – 2 <sup>nd</sup> period of work permit	<div>7   8   8   3</div> <div>Start      End</div>	<b>WP</b> NWP   SWP   NNWP
1513D – 1513F – 3rd period of work permit	<div>8   3   8   4</div> <div>Start      End</div>	<b>WP</b> NWP   SWP   NNWP

### Dataset

ident	num_wp	nnwp	wp	swp	nwp
G0471001	1	Yes	No	No	No
G0471001	2	No	Yes	No	No
G0471001	3	No	Yes	No	No

The “nnwp”, “wp”, “swp”, “nwp” variables correspond to answers given to the questions in the “Residence and work permits” module. The corresponding labels in the French, Italian and Spanish questionnaires are the following:

	England	France	Spain	Italy
No Need Work Permit	NNWP	PBAT	NEAT	NBAL
Work Permit	WP	AT	AT	AL
Selective Work Permit	SWP	ATP	ATP	ALS
No Work Permit	NWP	PAT	SAT	NAL

### 7.2.16. Qb\_transfer

**Observations:** One line per transfer for each person who has sent remittances at least once; and one line for the other persons.

**Variables:** This dataset contains all the answers to the Transfers module (about remittances).

### 7.2.17. Qb\_association

**Observations:** One line per period during which each person has joined a migrant association; and one line for the other persons.

**Variables:** this dataset contains all the answers to the Associations module .

### 7.2.18. Qb\_network

The Qb\_network file describes the stays abroad (out of Congo, Ghana or Senegal) of the respondent's relatives and friends (to better understand the boundaries of this social circle, see the questionnaire).

Note: Even though all individuals cited in this module live or have lived out of the African MAFE countries, some of them are not international migrants. For instance, a Senegalese respondent could have cited a friend who has always lived in Spain.

The Qb\_network file is a quite tricky file to manage because using it may require multiple matching operations with several files (and several identifiers). The example below shows how the information has been recorded in the questionnaires and transformed in the datafiles.

#### From the questionnaire to the dataset

##### Questionnaire

PEOPLE IN THE FAMILY/NETWORK WHO LIVE(D) OUTSIDE GHANA	M1	M2	M3	M4	M5
900 – Count in the GRID the number of family or personal network members who have lived outside Ghana [0   2] and fill in one column per person. (in principle, number equal to Q17TOT).					
901 – Relationship: the person is Ego's Code: 1. Partner + No. 2. Son / daughter + No. 16. Foster / adopted child + No. 3. Father / mother 4. Brother / sister 5. Uncle / aunt 6. Nephew / niece 7. Cousin 8. Grandfather / grandmother 9. Grandson / granddaughter 10. Son-in-law / daughter-in-law; stepson / stepdaughter 11. Brother-in-law / sister-in-law 12. Co-wife 13. Other relative, Specify 14. Friend 15. Other, Specify <i>If the person is Ego's child or partner indicate his or her number given in the grid.</i>	Relationship: [0   4]          No. Partner (Q101): [ ]  No. Child (Q202): [ ]	Relationship: [1   4]          No. Partner (Q101): [ ]  No. Child (Q202): [ ]	Relationship: [ ]          No. Partner (Q101): [ ]  No. Child (Q202): [ ]	Relationship: [ ]          No. Partner (Q101): [ ]  No. Child (Q202): [ ]	Relationship: [ ]          No. Partner (Q101): [ ]  No. Child (Q202): [ ]
902 – Sex: 1. Male 2. Female	[1]	[1]	[ ]	[ ]	[ ]
903C – Year in which they met <i>Cross out if the person is not a partner or a friend</i>	[ ]	[ ]	[ ]	[ ]	[ ]
903D – Year of death <i>Cross out if the person is not deceased</i>	[ ]	[ ]	[ ]	[ ]	[ ]

PEOPLE IN THE FAMILY/NETWORK WHO LIVE(D) OUTSIDE GHANA	M1	M2	M3	M4	M5
904 – Country 1 (1st country outside of Ghana). In plain text and CAPITAL letters	IVORY COAST	SPAIN			
904D – 904F – Start and end year of the stay in “Country 1” Cross out if the person is currently still living in this country	7 7 0 6 Start End	0 3 / / Start End	Start End	Start End	Start End
905 – Country 2 In plain text and CAPITAL letters	SENEGAL				
905D – 905F – Start and end year of the stay in “Country 2” Cross out if the person is currently still living in this country	0 6 / / Start End	Start End	Start End	Start End	Start End

## Dataset

ident	num_net	id_net	num_netmig	id_netmig	q904d	q904f	country	q901	q902
E110	1	M_E1101	1	M_E11011	1977	2006	COTE D'IVOIRE	Sister/brother	Man
E110	1	M_E1101	2	M_E11012	2006	.	SENEGAL	Sister/brother	Man
E110	2	M_E1102	1	M_E11021	2003	.	SPAIN	Friend	Man

The questionnaire excerpt shows the case of a respondent who has two persons in his social circle who lived abroad (out of Ghana) at some point. The first (num\_net=1) is his brother who used to live in Ivory Coast between 1977 and 2006, and has been living in Senegal since 2006. He also has a friend who has been living in Spain since 2003.

This information is “translated” in the datafile, where identifiers have been added for the respondent (ident), each member of his social circle (id\_net) and each of their stays abroad (id\_netmig). Variables related to the country of stay and the dates of migration have also been renamed.

**Observations:** One line per migration (for stays of at least one year) for each person in the respondent's network ; and one line for each respondent who has nobody abroad.

**Variables:** This dataset contains

- all the answers to the Networks module. Note that some variables have been renamed (see the example given above)
- computed variables presented below

**Table 24. Computed variables in Qb\_network**

Variable name	variable Kind	variable description
id_net	String variable	Computed variable from ident and num_net
id_netmig	String variable	Constructed variable from id_net and num_netmig
id_uni	String variable	Computed variable from ident and q901c (num_uni in the union database), useful to link this file to qb_union
id_enf	String variable	Computed variable from ident and q901e ( num_enf in the children database), useful to link this file to qb_children

## How to link qb\_network with qb\_union and/or qb\_children

### Example a: no link with with qb\_union and/or qb\_children

	ident	num_net	id_net	num_netmig	id_netmig	q904d	q904f	country	q901
1	S055702	1	M_S0557021	1	M_S05570211	1988	1990	LIBERIA	Sister/brother
2	S055702	1	M_S0557021	2	M_S05570212	1990	.	SENEGAL	Sister/brother
3	S055702	2	M_S0557022	1	M_S05570221	1990	1995	ITALY	Sister/brother-in-law
4	S055702	2	M_S0557022	2	M_S05570222	1995	.	UNITED STATES	Sister/brother-in-law
5	S055702	3	M_S0557023	1	M_S05570231	1995	1997	FRANCE	Friend
6	S055702	3	M_S0557023	2	M_S05570232	1997	.	SENEGAL	Friend
7	S055702	4	M_S0557024	1	M_S05570241	1992	1996	ITALY	Friend
8	S055702	4	M_S0557024	2	M_S05570242	1996	1999	SPAIN	Friend
9	S055702	4	M_S0557024	3	M_S05570243	1999	.	SENEGAL	Friend

The excerpt shows a Senegalese respondent's entire network abroad. He has 5 migrants in his social network:

- the first (his sister) moved to Liberia in 1988 and came back in Senegal in 1990, where she still lives;
- the second (brother in law) moved to Italy in 1990, then to the USA in 1995, where he still lives;
- the third went to France and came back in Senegal;
- the fourth went first to Italy, then to Spain and came in Senegal;

### Example b: qb\_network and qb\_union

Union database:

ident	num_union	id_uni	q102d	q102f	q103	q106
E8	1	U_E81	1977	1992	Partner deceased	Single, never married
E8	2	U_E82	1995	.	.	Separated/Divorced

Network database

	ident	num_migr	personid	persmigid	q904d	q904f	country	q901	id_uni
1	E8	1	M_E81	M_E811	1954	.	SPAIN	Partner	U_E82
2	E8	2	M_E82	M_E821	1984	1992	SPAIN	Partner	U_E81

The variable id\_uni allows us to link the two files. This respondent E8 started her relationship with U\_E81 in 1977 (q102d, union database). U\_E81 moved to Spain in 1984 (q904d, network database) and died in 1992 (q102 and q103 from union database). Here, the end of the migration period (q904f) corresponds to the death of the partner. E8 started a new relationship 3 years later (q102d=1995), with a man who has lived in Spain since 1954. Actually, this person is Spanish and was born in Spain (q107 from union database, not shown here). 1954 is his year of birth.

### Example b: qb\_network and qb\_children

Children database

	ident	num_enf	id_enf	q201n	q201d	q205
1	E101	1	E_E1011	1997	.	SENEGAL
2	E101	2	E_E1012	2002	.	SENEGAL
3	E101	3	E_E1013	2006	.	SENEGAL
4	E103	1	E_E1031	1993	.	ESPAGNE
5	E103	2	E_E1032	2002	.	ESPAGNE

## Network database

	ident	num_net	id_net	num_netmig	id_netmig	q904d	q904f	country	id_enf
1	E101	3	M_E1013	1	M_E10131	2006	.	SPAIN	E_E1013
2	E101	4	M_E1014	1	M_E10141	2006	.	SPAIN	E_E1012
3	E103	4	M_E1034	1	M_E10341	1993	1995	SPAIN	E_E1031
4	E103	4	M_E1034	2	M_E10342	1995	1997	SENEGAL	E_E1031
5	E103	4	M_E1034	3	M_E10343	1997	.	SPAIN	E_E1031
6	E103	7	M_E1037	1	M_E10371	2002	.	SPAIN	E_E1032

The respondent E101 has 3 children, all of them were born in Senegal (q205, children database). The child E\_E1011, born in 1997 (q201n), is not in the network database because he has always lived in Senegal. The two others, born in 2002 and 2006, moved to Spain in 2006 (q904d – country in network database), where they still live (q904f is missing).

The respondent E103 has 2 children born in Spain. The first child (E\_E1031) was born in 1993 (q904d =q201n), moved to Senegal in 1995 and returned to Spain 1997. The second one (E\_E1032) was born in Spain in 2002 and has not moved since then (q904d = q201n). He did not migrate, but he is included in the network database because he was born out of Senegal. Note that some individuals of the network module are not migrants.

## 8 CONTEXTUAL DATA

---

Two contextual databases have been prepared during the MAFE project:

- **A general database (MAFE CDB)** based on existing and publicly available contextual data will be delivered in late 2014. Users will be able to browse the data and linked meta-data from Ined Nesstar webview tool, available at :

<http://nesstar.ined.fr/webview/?v=2&study=http://nesstar.ined.fr/obj/fCatalog/Catalog17&language=en>.

The same link will give direct access to the downloadable data files in excel and STATA formats as well as to meta-data in pdf.

The database consists of about 85 indicators covering domains relevant for research on migration. This includes demography, economics, employment and unemployment, education, political context, etc. The sources used to collect the data are mainly international databases e.g., Eurostat, World Bank, OECD International Migration Database. Most indicators cover all the nine “MAFE countries” and provide, as far as possible, data comparable across countries and years. Specific meta-data provide information on the sources used, on indicator definitions, as well as on possible comparability issues.

- **A policy database (Impol)** which is still a work in progress. This base is presented in a working paper (available on the MAFE website):

Mezger, C. and A. Gonzalez-Ferrer (2013). The ImPol Data-base: A New Tool to Measure Immigration Policies in France, Italy and Spain since the 1960s. MAFE Working Paper 34. Paris, INED: 43.

It can be accessed on request by contacting its authors at:

Amparo González Ferrer <[amparo.gonzalez@cchs.csic.es](mailto:amparo.gonzalez@cchs.csic.es)>  
Institute of Economy, Geography and Demography (IEGD)  
Center for Humanities & Social Sciences (CCHS)  
Spanish National Research Council (CSIC)

## 9 APPENDICES

---

1. List of differences between MAFE-Congo, MAFE-Ghana and MAFE-Senegal databases
2. Explanation of the coding of the activity variable to ISCO-08 and ISEI-08 codes

## **Differences between the MAFE datasets** **Household & Biographic questionnaires**

## **EXPLANATION OF THE CODING OF THE ACTIVITY VARIABLE TO ISCO-08 AND ISEI-08 CODES**

*This document explains how the activity variable has been coded into ISCO and ISEI codes according to the ILO classification and Ganzeboom's ISEI coefficients. This document has been proposed by Pau Baizan and the coding syntax (in stata) he used for the Senegal has been adapted in the two others countries (Congo and Ghana).*

As we know, the same values of the variable q403 may contain very different occupations which made it impossible to assign ISCO codes to immigrant jobs. The problem is substantially alleviated by looking at the variable q403\_b, from which more precise job descriptions can be extracted. The first dilemma was whether to use ISCO-88 or ISCO-08. The ISCO-08 has replaced its 88 counterpart as the official job classification by the ILO, so the choice may seem clear. However, ISEI coefficients are based on ISCO schemes and there is hardly any evidence of use of ISEI-08 yet. This is because the ISEI-08 coefficients, (i.e. coefficients based on ISCO-08 scheme) found on Ganzeboom's web page were calculated very recently (in 2010). However, ISEI-08 is based on a broader dataset and considers women's occupational attainment too. Therefore, it seems reasonable to choose ISEI-08 rather than ISEI-88. There is a trade-off involved here, but more details thereon will be presented below.

### **1. Basic approach**

As there is some initial job classification in MAFE that is fairly similar to ISCO (i.e. the variable q403), this basic classification was respected to a certain extent. For example, if the job description (q403\_b) is vague, then the value of q403 was decisive for the assignment of the ISCO code. One assigned four digit ISCO coefficients to occupations, unless the job description was too general, in which case the three-digit ISCO was assigned (which is no problem, as three digit ISCOs are also assigned ISEIs).

### **2. Difficulties**

While in a great majority of cases the assignment of the ISCO was straightforward, there were some troubles with certain categories, primarily due to insufficiently detailed information in the dataset. This is no wonder, because in some cases several questions would be necessary to be sure about the right "choice" of ISCO. The agricultural jobs are especially affected by this and we find this the single biggest problem that we have concerning the job classification. Namely, ISCO-08 (just like ISCO-88) distinguishes between the following categories in the agriculture:

6110 – Market-oriented skilled agricultural workers (mostly crop growers), with ISEI value of 18

6310 – Subsistence farmers, fishers, etc, with ISEI value of 10

## 9210 – Agricultural labourers, ISEI value of 15

So, we have three categories, each with different ISEIs (even though all the three very low). On the other hand, most responses in MAFE were very general, as can be seen from these examples listed below:

Agricultor

Agriculture

Aider Les Parents Dans Les Champs

Cultivador

Lavorava La Terra Del Padre

Trabajando En El Campo Con Su Padre

Since one assumes that very few African immigrants in France, Spain or Italy are engaged in agricultural activities for subsistence or are market-oriented agricultural workers, we would be confident enough to assign them to category 9210 (i.e. farm labourers). But, when it comes to agricultural activities performed in Senegal (prior to migration or by non-migrants) the answers listed above leave the possibility open to classify jobs in any of the three ISCO categories. It is especially difficult to know whether the agricultural activity was only meant to provide subsistence or whether there was also some market activity involved. So, some feedback on this would be necessary. For now, one classified all these “unclear” answers (for q403=111) into 9210, but only because it seemed as the safest solution since its ISEI is between the ISEIs of two other categories.

There is another doubt one has regarding the agricultural jobs. As we said, there is some initial classification already incorporated into the dataset (q403). There is a very broad and the biggest group called “Agriculture, cultivateur”, but there are also other smaller categories such as breeders, shepherds or agricultural labourers. However, when one looks into more detailed job description we notice that some jobs are represented in different categories. For example, job description “working in the field” can be found under q403=111, q403=112, q403=115 and q403=117. So, it is not clear to me whether this assignment of job descriptions was based on some extra information not reported in the dataset or whether it was rather arbitrary. Anyhow, concerning all these “unclear” cases, we respected the classification already present in the dataset for the time being and until getting some feedback from the others.

In summary, it is very possible that some assumptions need to be made regarding the classification of the agricultural jobs and we believe that the decision upon that question should be a result of a group discussion.

### **3. Some other, hopefully less serious difficulties**

It can also be argued that some changes of ISCO classification produced even more doubts when deciding on job classification of immigrants. For example, ISCO-88 contained the category “Small enterprise general managers” which included small merchants and shop owners. However, the size of enterprise matters much less in the new ISCO than was the case in the old version and it is sometimes not easy to determine how these small merchants (a sizeable “population” in the dataset) should be classified. Using ILO conversion tables and Ganzeboom’s comments on the new classifications, it seemed most appropriate to classify most of these small traders as shop owners.

Another novelty of ISCO-08 is the separate category for job supervisors. However, it is very likely that not all interviewees actually indicated that their job included some supervising activities too. Hence, one could only classify as supervisors those respondents who actually indicated that they performed this task too.

#### 4-ISCO and ISEI codes
